These instructions relate **ONLY** to this product and contain important information for using the product for the first time. Please keep these instructions for later reference and should always accompany the product in the event of transference to a new user.

1. Introduction

Dear Customer,

Thank you for purchasing the solar light.

With this solar light you purchased a product manufactured according to the current state of technology.

This product fulfils all requirements of the valid European and national regulations. The conformity was proved. The relevant declarations and documentation are deposited with the manufacturer.

To maintain this state and guarantee a safe operation, you as the user will have to follow this operating manual!

2. Safety Instructions

- In case of damages caused by not following this operating manual, the warranty rights will expire! We exclude liability for any consequential damages!
- We exclude liability for property or personal damages caused by inappropriate handling or not following the safety instructions.
- In these cases any guarantee rights will expire.

Due to safety and admission reasons (CE) it is not allowed to arbitrarily reconstruct and/or change the solar light.

Therefore, please keep to the operating manual. The accident prevention rules of the association of the industrial trade cooperative association for electric plants and working material are to be considered in industrial environments

3. Intended Use and Function

The solar lights are designed for outdoor use. They must be placed in a shade-free sunny position.

The built-in battery is charged by the solar cell in the upper part of the lamp. The light switches on automatically at dusk and switches off again at dawn. The light sources used are 96 energy-saving light-emitting diodes (LEDs). A very realistic flame effect is created in connection with a special control system.

During longer periods without sunlight, the battery is insufficiently charged to ensure that it is always ready for operation. However, this does not mean that the solar lamp is defective. Wait for the next sunny days and the light will work again.

The lamp can continue to be used outdoors during the winter months. Only the solar module must be kept snow-free. When wintering indoors, the lamp must be fully charged by the sun and switched off before wintering.

The battery in the lamp is permanently installed and cannot be replaced. However, the high-quality Li-Ion battery ensures optimum function of the lamp for several years.

The lamp can be plugged into the ground via an earth spike or screwed firmly into place via a mounting plate.

4. Putting into Operation

1. Carefully remove the lamp from its packaging.
2. The lamp can be switched on via the pressure switch (Fig. 1) on the underside.
3. The lamp can either be fixed to the ground via an earth spike or the mounting plate (e.g. on a base) (Fig. 2).

The solar light is now activated and ready for use!

5. Changing the battery

The Li-Ion battery is permanently installed in the lamp and cannot be replaced.

6. Malfunctions

- **Lamp is not automatically switched on at darkness**
 - An outside light source (e.g. streetlight) simulates daylight and prevents the lamp from switching on? Place the lamp at a darker location!
- **Lamp is not switched on at darkness or only for a short period of time.**
 - Is the lamp switched on?

7. Technical Data

- Solar panel: 0.7 Wp crystalline
- Illuminant: 96 orange LEDs
- Battery: Li-Ion 3.7 V/ 1200 mAh
- Protection class: IP 65
- Protection class: III
- Flash time: max. 20 hours with fully charged battery
